### **FOR IMMEDIATE RELEASE**

## **EMI and Beyonics sign MOU to set up High Volume EMS Service Effort**

*Collaboration will spearhead the development of high volume Asian manufacturing services for products requiring design and development in North America*

**Santa Ana, CA – November 6, 2009** – Express Manufacturing Inc (“EMI”), a leading private electronics manufacturing services (“EMS”) company based in Santa Ana, California, USA, today announced it is working together with Beyonics Technology Limited (“Beyonics”), a company listed on the Singapore Exchange and a major player in the electronics manufacturing and precision engineering services landscape in Asia, to develop business platforms to address high volume production in Asia as well as performing new product introduction (“NPI”) and product development in the USA. A memorandum of understanding (“MOU”) has been signed by the companies to effect this business collaboration.

Beyonics, a Singapore-incorporated company, is a leading integrated manufacturing services provider in Asia and caters to Original Equipment Manufacturers (“OEMs”) and Original Design Manufacturers (“ODMs”) in various industries such as data storage and enterprise

computing, consumer electronics, biomedical diagnostic and therapeutic devices, automotive components, communications and networking, and security surveillance applications. It has manufacturing facilities in Singapore, Malaysia, Indonesia, Thailand and China. It achieved revenue of more than USD 1 billion for the financial year ended July 31, 2009.

EMI, with revenue of USD 80 million, has design, development, production and warehousing capabilities in Southern California, and Dongguan, China.

This business collaboration will bring together EMI's production development technologies and nearly 30 years of expertise in the business of NPI and volume production with Beyonics's multi-national EMS services which include printed board assembly, full turnkey system assembly, full box build, testing, packing and distribution, fabrication and manufacturing of plastic injection molds and parts, precision metal stamping and tooling design.

Both Beyonics and EMI are geared for several key markets such as telecommunication and medical markets as both have ISO13485 certifications. The companies also share the ideology of total intellectual property ("IP") protection which is paramount to each company's customers.

Mr. C.P. Goh, CEO of Beyonics said, "The collaboration will bring new business opportunities to Beyonics as we could now take part in NPI efforts with customers in North America through our affiliation with EMI. Our offering of high volume EMS services is known for flexibility and close management style. Along with our high standards of core technologies and process know-how, we can now offer a wider range of services that include NPI solutions".

Mr. C.P. Chin, CEO of EMI said, "This collaboration with Beyonics provides EMI to participate in high volume manufacturing opportunities which we do develop as an NPI program or as a mid-range manufacturer but off load to larger EMS companies once quantities hit the hundreds of thousands per month. The cooperation with Beyonics creates a multi-national EMS endeavor that will rival any Tier 1 EMS worldwide. Our tandem will prove customer friendly as we can move quickly and with more flexibility."
