FOR IMMEDIATE RELEASE

Express Manufacturing, Inc. Announces ISO 13485 Compliance Program to Support the Medical Electronics Community

Anaheim, CA – March 31, 2009 – Express Manufacturing, Inc. (EMI), a leader in electronics manufacturing services, today announced its ISO 13485:2003 Compliance Program. The ISO 13485:2003 standard is a part of the international ISO organization and sets standards for design and process control including environmental requirements, traceability, record retention, regulatory audits and management practices for medical devices. This standard ensures product quality and safety. The medical electronics industry has been growing steadily, with more and more medical electronics products demanding the ISO standard. For the past 27 years, EMI has provided world-class services to many market segments including telecom, computer, medical, industrial control, defense/ aerospace and instrumentation. ISO 13485:2003 status will help EMI further expand its medical electronics segment. EMI has gone through extensive efforts to achieve the ISO certification, which is expected to be completed by the summer of 2009.

Additionally, EMI provides medical electronics turnkey services which have helped many customers achieve cost savings through improved process efficiency. Most electronics manufacturing service companies provide only manufacturing support. After the products are built, they are shipped to the customers for warehousing and shipment. EMI's Turkey Services help customers eliminate many of these steps, by warehousing the finished products and drop-shipping to end users or OEM customers as instructed. In some cases, these medical electronics products are shipped directly to home-bound patients. When return or repair is needed, the products can be returned by the end users or patients directly to EMI for repair and refurbishment. By using the EMI Turkey Services, customers can completely eliminate the need for product manufacturing/assembly lines, warehousing and repair departments. "Our customers have really enjoyed the Turnkey Services," commented C.P. Chin, President of Express Manufacturing, Inc., "One of our top medical electronics customers has been using this service for many years. Because of our direct drop-ship process, our customers can devote their energy towards innovation and marketing."

About Express Manufacturing, Inc.

Founded in 1982, Express Manufacturing, Inc. is an ISO 9001:2000 certified provider of high-mix, medium-to-high volume printed circuit board assembly and system integration. EMI has built its reputation on three principles: total customer satisfaction, rapid response, and streamlined efficiency. Complete vertical integration – from specialized engineering services (such as printed circuit board layout, prototyping and test development) to supply chain management, manufacturing, fulfillment and service depot – allows EMI to capture efficiencies, maintain cost advantages and deliver turnkey solutions to its customer base. Because of the depth of services EMI offers, customers are often able to reduce the number of steps from design to production, thereby minimizing cost and time to market, and maximizing value.
